## Orientation Session Report

### Introduction:

This report is submitted as part of Orientation for the M-Tech Production & Marketing AI/ML Internship Program, Batch 2026. The orientation session served as an introduction to the organization, the internship roadmap, and what is expected from us as interns. M-Tech Production & Marketing focuses on bridging the gap between academic knowledge and industry requirements. The internship follows a "Zero to Hero" approach, aiming to build our technical skills, confidence, and a strong portfolio over a period of six weeks.

### Objectives:

- Get familiar with the internship structure and weekly plan.
- Understand the learning methodology and how tasks will be assigned.
- Learn about project requirements and how we will be evaluated.
- Recognize the role of AI tools, LinkedIn, and GitHub in our professional growth.

### Task Description:

The task assigned was to watch the complete orientation video, understand the internship structure and expectations, and prepare a detailed report based on what was discussed. The session covered the internship timeline, learning process, project work, and professional development guidelines.

### Work Done:

I watched the full orientation session and took notes. The internship is 6 weeks long and covers 7+ domains. We will get daily recorded and live lectures, dedicated tasks with a mentor, and one-on-one sessions with the supervisor. The learning process is: learning materials → self-study → trainer lecture → practical evaluation → submit task → get feedback. This cycle will help us improve with each task.

The session also focused on using AI effectively through prompt engineering and choosing the right tools. A key quote was: **"AI will not replace you, but a person using AI will"**

**replace you."** We will first build our own project and then contribute to a real M-Tech project like the University Digital Transformation Portal, Society Digitalization Initiative, or Society Management System.

To complete the internship, we need 100% task completion, 1+ deployed project, 500+ LinkedIn connections, and 10+ GitHub commits per week. We must be consistent, document everything, collaborate, communicate regularly, and publish our work on LinkedIn or GitHub with live demos so it is findable.

### **Challenges Faced:**

Since this was just an introductory session, I did not face any technical difficulties. The main challenge ahead will be managing my time effectively to meet all the requirements like weekly GitHub commits, building LinkedIn connections, and completing tasks on time while maintaining quality.

### **Key Learnings:**

This session taught me that the internship is not just about technical skills. It also focuses on professional development including communication, collaboration, documentation, and building an online presence. I learned the importance of using AI tools responsibly to improve efficiency. The "Zero to Hero" motto motivated me to take this internship seriously and work hard to build a strong portfolio that will help me in my future career.

### **Conclusion:**

The orientation session was very informative and gave me a clear picture of what this internship is all about. I now understand the structure, the learning process, the project requirements, and what is expected from me. I am excited to start this journey and will follow all the guidelines given by the supervisor. I believe this internship will help me grow both technically and professionally.
